

Fronius SolarWeb

Internet platform for monitoring and analyzing PV systems

PV system data is always close at hand via the Internet. Simple and user-friendly. Fronius SolarWeb is the modern, free Internet platform for monitoring and analyzing PV systems. This online service, developed in-house by Fronius, is easy-to-use as well as user-friendly and provides comprehensive analysis options.

Interactive diagrams enable simple and fast navigation and data visualization. Individual access rights ensure requirements-based utilization. For owners of several systems, all PV systems are accessible under one login.

POWERING YOUR FUTURE

Fronius SolarWeb Features

The most important information at a glance. The start page contains a monthly diagram and a power diagram with key system data, important user information as well as any warning messages.

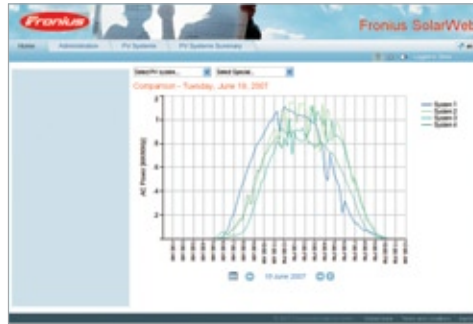

Multi-system management. Multiple PV systems can be accessed via one login. Cumbersome multiple logins are not required. It also provides completely new system and visualization options such as a total view of all systems in one single diagram as well as a comparison of several systems together.

Interactive diagrams. Interactive diagrams provide fast and easy navigation for the user. Simply move the mouse over the diagram to get a detailed view.

Individual access rights. You have the option of assigning different authorization levels such as "guest access" or "full access."

Service messages via e-mail, SMS or Fax. If desired, service messages can be sent via e-mail, SMS or fax to enable quick reaction to service requests.

Demo system. Our model system at the Fronius factory in Pettenbach, Upper Austria gives you an overview

of the possibilities for visualizing data using Fronius SolarWeb. Available at <http://solarweb.fronius.com>

Easy registration. Registration is carried out by entering your important system and owner data at www.fronius-usa.com. Fronius SolarWeb can be used immediately after sending the registration confirmation via e-mail.
